PANDA Plugin Documentation

It's been a very long time coming, but over the holiday break I went through and created basic documentation for all 54 currently-available PANDA plugins. Each plugin now includes a manpage-style document named `USAGE.md` in its plugin directory.

You can find a master list of each plugin and a link to its man page here:
<https://github.com/moyix/panda/blob/master/docs/Plugins.md>

Hopefully this will help people get started using PANDA to do some cool reverse engineering!
